

What Historic IR Documents Have You Had Trouble Finding?

ACM SIGIR is undertaking an effort, under the leadership of Donna Harman, to identify, acquire licenses for, scan, and make available online, hard-to-find historical materials in information retrieval. These include classic technical reports, out-of-print books, conference proceedings, journal articles, important product manuals, ephemera, and other items. We are seeking the input of the IR community in suggesting important materials that are out of print or otherwise inaccessible. Please send suggestions of the top 5 to 10 or more items you'd like to be able to access to historical@DavidDLewis.com. The more information you can provide about the origin and possible location of copies of the item, the better. We're also very interested in hearing about items you already have a copy of, and think might be useful to include in the archive.

Thanks, Dave Lewis and Donna Harman

Call for Reviewers: ACM Computing Reviews

ACM Computing Reviews is seeking to expand its coverage of current computing literature.

ACM Computing Reviews is looking to expand its coverage of current computing literature. Having published reviews by area experts for over 40 years, Computing Reviews was launched online in 2001 when the ACM partnered with Reviews.com. The online edition now publishes new reviews daily, and we would like to see the Information Retrieval area receive greater exposure.

Apply to become a reviewer for Computing Reviews. A collaboration between the ACM and Reviews.com, Computing Reviews publishes reviews by area experts in monthly issues and daily online. As a reviewer, you will make a significant contribution to the computing community by using your expertise in writing informed critiques of current computing literature. To apply to become a reviewer, go to www.reviews.com/reviewer, then click on Become a Reviewer.
